

CONFIGURING SECURE TEMPLATES FOR AN APPLICATION AND NETWORK MANAGEMENT SYSTEM

ABSTRACT OF THE INVENTION

- 5 Methods and Systems for configuring secure templates for an
application and network management system to provide network security. A
template for an application and network management system is configured
with first information for determining whether at least one message received
by the template should or should not be processed by the template. The
10 template is configured with second information for processing data associated
with at least one received message. The template is configured with third
information for preventing the communication of at least one received
message to other templates for the application and network management
system.
